# Deployment research

Cloudflare

- Utilizes a global Content Delivery Network (CDN) that caches your static assets closer to your users, improving load times.
- Provides advanced security features, including DDoS protection and a Web Application Firewall (WAF), to safeguard your site.
- Allows you to deploy serverless functions close to your users, enabling faster response times.

Vercel

- Seamless integration with Next.js, simplifying the deployment process.
- Built-in CDN and edge functions for fast page loads and API responses.
- Provides a good CI/CD pipeline and easy integration with GitHub.
